Test Plans

Feature	Positive Test Cases	Negative Test Cases
Document Saving	<p>Data Description: Attempting to save a document with a unique title/folder combination containing hello world text with rich text formatting to a folder</p> <p>User Action: User types up a new document in the editor tab, enters a unique title, selects a folder, and clicks save.</p>	<p>Data Description: Attempting to save a document with a duplicate name/folder combination, and selecting NOT to overwrite.</p> <p>User Action: User types up a new document in the editor tab, enters a title, and then selects a folder that contains a file with the same name. When prompted to overwrite, the user selects no.</p>
Document Loading	<p>Data Description: Attempting to request a file which is listed under the current user and the current user is logged in</p> <p>User Action: User opens document browser and selects a document</p>	<p>Data Description: Attempting to request a file for another user while logged into a different user or not logged in at all.</p> <p>User Action: User enters a document hash into the url but is not logged in.</p>
AI Prompt Generation	<p>Data Description: A simple hello world request can be completed without an error and generate unique responses</p> <p>User Action: User types "hello world" into the prompt generation field, presses generate, and receives multiple responses</p>	<p>Data Description: The prompt text is over an acceptable length and an error is returned to the user</p> <p>User Action: The user pastes a very large text into the prompt generation field, presses generate, and is shown an error representing the issue</p>

Individual Contributions

Name	Latest Commit & Description
Davis Davalos- DeLosh	Working on adding the AI prompt autocompletion to the document writer and making it work with Quill
James Vogenthaler	Implemented user file directory and document loading. Currently working on the ability to create folders, sort documents, and rearrange files/folders in the file directory.
James Boynton	Implement the saving of documents into the database. Also implemented user registration and authentication. Worked together with James V on implementing the database and database structure.
Aleksey Huhua	Working on finishing the prompt generator page. Will continue on to create an overwrite procedure and implement folder selection.
Nolan Ales	Worked on getting the project up on Heroku, and working on adding keyboard shortcuts w/ James V using Quill.
