## Project Milestone 3

Github Link	https://github.com/CU-CSCI-3308-Fall-2021/CSCI-3308-Fall21-018-01	
What features have been completed?	<ul> <li>Basic rich text editing</li> <li>Basic prompt generation</li> <li>Website layout</li> </ul>	
What is working in the demo?	<ul> <li>Basic website layout with working navigation bar.</li> <li>A simplified (and currently html-less) RTE residing in the document editor</li> </ul>	
What issues currently exist with the demo?	<ul> <li>Document saving &amp; loading is unimplemented</li> <li>Design is not unified (yet)</li> <li>Rich text editor does not currently have supporting layout</li> </ul>	
What are some suggestions each team member has?	Davis:	Dynamically added/removed prompts on the prompt generation page
	James V:	Several key features for the rich text editor: (1) Print to pdf; (2) Column and page formatting; (3) Page numbers; (4) Tables
	James B:	Creating simple user registration (for later saving and loading of documents). Also a way for the user to name their document (probably with a modal)
	Nolan:	Once the project pages are unified and look the same, a toolbar that is fluid throughout the project should be added next week.
	Sheng:	Give users more text editing functions
	Aleksy:	Convert files to ejs files and use partials for header
Individual contributions by each team member	Davis:	Prompt generation page logic and helper library
	James V:	Implemented a basic rich text editor using Quill.js

James B: User documents page and basic logic (in js) for

loading and creating new documents.

Nolan: Home page written in HTML that will follow a similar

layout to the rest of the project pages. Also spent some time learning up on Python and come cyce.js,

but spent most time on the home page.

Sheng: Add text function through quill

Aleksy: Prompt generation page html and layout

## **Updated Architecture Plan:**
